

OILAGE

·ANTI-AGEING·

FOR SENSITIVE
MATURE SKIN

- Stimulates synthesis of lipids and restores the protective functions of the epidermis
- Increases the level of skin hydration and nourishment
- Increases the density of the epidermal matrix
- Reinforces the antioxidative protective system
- Restores the regenerative abilities of the cells of the epidermis

Nourishing day cream that restores skin density

- Corrects and lifts the oval of the face
- Reduces wrinkles
- Improves the elasticity of the skin and moisturises it
- Ensures thermoregulation of the skin
- The Anti-Pollution formula stimulates the protective function of the epidermis

Volume: 50 ml, jar

Repairing night cream that restores skin density

- Corrects and lifts the oval of the face
- Reduces the depth and length of wrinkles
- Intensely regenerates the skin and combats external and internal causes of ageing
- Restores firmness and elasticity of the skin and improves its condition
- Eliminates the symptoms of tiredness
- The Anti-Pollution formula stimulates the protective function of the epidermis

Volume: 50 ml, jar

Face cleansing oil syndet

- Effectively removes make-up and all impurities without causing irritation
- Does not cause dehydration or tightness of the skin
- Regenerates the epidermis and restores its nutritional balance
- Forms an occlusive barrier on the epidermis and protects it
- The Anti-Pollution Formula stimulates the resistance and barrier function of the epidermis

Volume: 200 ml, bottle

Concentrated anti-wrinkle eye cream

- Reduces darkness and puffiness around the eyes
- Smooths out even deep wrinkles
- Ensures an immediate effect of revitalised skin around the eyes
- Visibly rejuvenates and regenerates the skin
- Reverses perimenopausal ageing of the skin

Volume: 15 ml, tube

SKIN DURING PERIMENOPAUSE

Małgorzata Berner-Rutkowska, MD, dermatologist

Menopause is a breakthrough moment in the process of skin ageing. The quite rapid decrease of the level of oestrogens causes increased degradation of collagen and elastin fibres and slowing down of repair processes. As a result the skin becomes thinner and dehydrated, it loses its elasticity whilst wrinkles become deeper.

DURING THE FIRST FIVE YEARS OF MENOPAUSE THE CONTENT OF COLLAGEN IN THE SKIN DECREASES EVEN BY AS MUCH AS 35%.

● hyaluronic acid ●●● collagen ■ elastin

- Reduced **QUANTITY OF COLLAGEN** and **ELASTIC FIBRES**
- **THINNING OF THE SKIN**
- **DECREASED** production of **HYALURONIC ACID**
- **WEAKENING** of the walls of **BLOOD VESSELS**
- **REDUCTION OF THE** skin's **REGENERATION ABILITY**

- **DRYNESS** of the skin
- **DAMAGED LIPID BARRIER**
- **DECREASED TONE** and elasticity
- **FURROWS, WRINKLES, CHANGES IN THE OVAL** of the face

In order to reduce the symptoms characteristic to menopause, as early as in your 40s you should remember about correct, comprehensive and systematic care which will delay and mitigate the symptoms of ageing. Mature skin requires the creams which will not only moisturise it but also restore its lipid protective barrier and keep moisture in the cells of the skin, improving, at the same time, the skin's density and tone and correcting the oval of the face.

Małgorzata Berner-Rutkowska, MD, dermatologist

HOW TO MITIGATE AND MINIMISE PERIMENOPAUSAL CHANGES IN THE SKIN

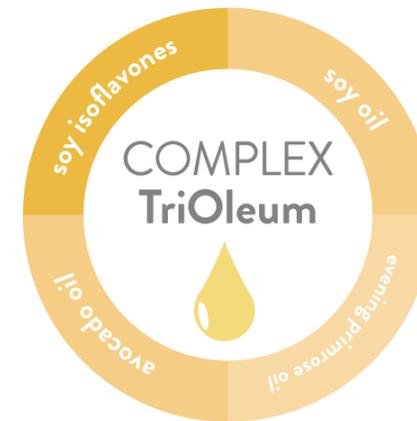

Regardless of her age every woman wants to feel good in her skin. In my profession I am frequently asked about correct skin care, the possibility of improving its appearance and about preventing skin ageing processes. The products in the Oilage line ensure comprehensive skin care for women in perimenopause.

Małgorzata Berner-Rutkowska, MD, dermatologist

OILAGE
·ANTI-AGEING·

TriOleum Complex

An innovative complex developed by Biogened Research and Development Institute

Reverses perimenopausal ageing of the skin – stimulates collagen and elastin synthesis, reinforces intercellular connections.

Nourishes and regenerates the skin, slows down the ageing process – prevents oxidation of cellular lipids and neutralises free radicals.

Anti-Pollution formula: Protects the skin against the impact of the polluted environment and stimulates the protective function of the epidermis – restores the lipid barrier and stimulates the production of ceramides.

Visibly improves the condition of the skin – restores the parameters characteristic of a young-looking skin: elasticity, cohesion, density, hydration and smoothness.

Menofit®

- compensates for cellular deficiencies
- restores keratinocyte production balance
- stimulates collagen production and reduces its decomposition, thus maintaining the correct structure, density and hydration of the skin
- smooths out wrinkles

A new oil series for mature, sensitive skin

Reforcyl®

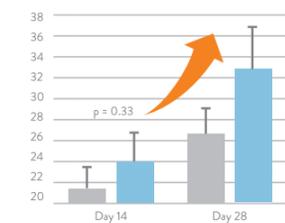

- activates the synthesis of keratinocytes
- stimulates lipid production and reinforces the lipid barrier of the epidermis
- provides skin cells with the energy necessary for their correct functioning
- increases the level of moisture in the skin
- improves the firmness, elasticity and smoothness of the skin
- reduces the depth of wrinkles

REDUCES AND SMOOTHS OUT WRINKLES BY 14% IN 28 DAYS

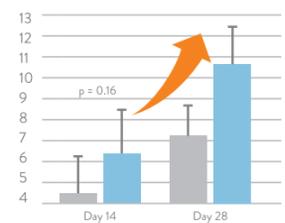

REFORCYL® documentation, RAHN AG

INCREASES THE LEVEL OF MOISTURISATION BY 26% WHEN COMPARED TO PLACEBO IN 28 DAYS*

REDUCES ROUGHNESS OF THE SKIN BY 48% WHEN COMPARED TO PLACEBO IN 28 DAYS*
